```
This is the envelope (Env)/FS polypeptide of a new human endogenous retrovirus (HERN), designated IDDMK1.2-22, that has been identified as the source of superantigen (SAg) activity in insulin-dependent diabetes mellitus (IDDM) patients. The endogenous retrovirus is ubiquitous in the human genome but is only expressed in diabetic individuals. The HERV encodes SAg activity within the env gene. A claimed process for the diagnosis, including the pre-symptomatic diagnosis, of a human autoimmune disease associated with a HERV having SAg activity comprises specifically detecting in a biological sample either: (a) the mERN of a expressed HERV having SAg activity (especially IDDMK1.2-22 5'LTR, 3' long terminal crepeat, env or pol); (b) a protein or peptide expressed by the HERV (see AAW97745-48); (c) antibodies specifically associated with the HERV. HERV, or (d) SAg activity specifically associated with the HERV. HERV, or (d) SAg activity specifically associated with the HERV. HERV, or (d) SAg activity specifically associated with the HERV. HERV. Or (d) SAG activity specifically associated with the HERV. HERV. Or (d) SAG activity or or of dentify substances here.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        121 PKGSKNTEVLVWEECVANSVVILQNNEFGTIIDLGTSRSILPQLLRTNSVVSKCTSESSC 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          capable of blocking transcription or translation of SAg-encoding nucleic acid sequences, useful in therapy and/or prevention of autoimmune disease associated with the SAg. A nucleic acid encoding human retroviral SAg can be used as a DNA vaccine. Expression of the endogenous SAg in IDDM suggests a general model according to which self SAg-driven and systemic activation of autoreactive T cells leads to organ-specific autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated human endogenous retrovirus - used to develop product for the diagnosis, prevention and treatment of autoimmune disease, particularly insulin dependent diabetes mellitus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        human retroviral SAg can be used as a DNA vaccine. Expression of the endogenous SAg in IDDM suggests a general model according to which self SAg-driven and systemic activation of autoreactive T cells leads to organ-specific autoimmune disease.
                                  Human endogenous retrovirus IDDKK1.2-22 envelope protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 associated human endogenous retrovirus (IDDMK1.2-22) env protein.

The retrovirus has Superantigen (SAg) activity. It can be used as part of a method is specifically used to diagnose type I diabetes mellitus. Modified proteins expressed by the retroviral sequence (without SAg activity but still able to induce an immune response) are useful in vaccines to treat or prevent SAG-related autoimmune disease; nucleic acid sequences encoding (modified) SAg are important in pathogenesis of autoimmune disease, probably by activating autoreactive T cells. The method is very specific (it can differentiate between expressed and non-expressed viral nucleic acids) and can be used corp plasma samples can be tested without extensive preparation and diagnosis can be made before clinical signs are apparent, allowing early intervention before severe tissue damage has occurred.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

```
The sequence is that of an insulin-dependent diabetes mellitus associated human endogenous retrovirus (IDDMK1.2-22) env/fs-sag protein. The retrovirus has Superantigen (SAG) activity. It can be used as part of a method is specifically used to diagnose type I diabetes mellitus. Modified proteins expressed by the retroviral sequence (without SAG activity but still able to induce an immune response) are useful in vaccines to treat or prevent SAG-related autoimmne disease; nucleic acid sequences encoding (modified) SAG can be used similarly to treat such diseases. Retroviral-encoded SAG are important in pathogenesis of autoimmune disease, probably by activating autoreactive T cells. The method is very specific (it can differentiate between expressed and non-expressed viral nucleic acids) and can be used even where the pathogen is an ubsquitous endogenous retrovirus. Blood
Diagnosing human autoimmune disease by detecting retrovirus with superantigen activity - new retrovirus associated with type 1 diabetes, its proviral DNA, and related vectors, transformed cells, proteins, antibodies and specific binding agents, used for treating or preventing autoimmune disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         diagnosis can be made before clinical signs are apparent, allowing early intervention before severe tissue damage has occurred.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             plasma samples can be tested without extensive preparation and

The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AA157546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placents. The probes are useful for antenatal diagnosis of
  specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      by probe for measuring placental gene expression.
                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to human single exon nucleic acid probes (SENP: see AA11068-AA120459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical espithenial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Note: The sequence data for this patent did not form part of the printed

```
The sequences given in AAR29646-51 are encoded by a DNA fragment derived from the Entomopoxvirus Amsacta moore! (AmEPV) around the spheroidin DNA sequence. The open reading frames encode the spheroidin protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                itself and also other structural or regulatory genes associated with spheroidin. Bey Spheroidin has no significant amino acid homology to any previously reported protein. It is a non-essential protein which makes the coding region desirable as a site for the insertion of exogenous DNA. The spheroidin gene is naturally expressed at high levels. Small fragments of the surrounding DNA can be used as regulatory sequences if placed in operative association with foreign
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            60 CLMPAVQ-----NWLVEVPTVSPNSRFTYHMVSG---MSLRPRVNYLQDFSYQRSLKFR 110

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     óλ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   염
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (see AA10010-AA11006). The present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic aeticlogy. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative
                                                                                                                                                                                                                                                                                Peptide #474 encoded by probe for measuring human breast gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       breast disease and non-carcinoma tumours. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel single exon nucleic acid probe used to measuring gene expression in a human breast \cdot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to novel single exon nucleic acid probes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

Amsacta moorei entomopoxvirus

WO9413812-A.

AAR29648;

AAR29648

ò g

Length 1003;

```
This sequence is encoded by the Amsacta moorel entomopoxvirus (AmEDV) spheroidin gene, which is an example of the gene of the invention, which encodes a 115 kDa protein. EPV spheroidin and thymidine kinase promoters can be used in DNA constructs and vectors for expression of heterologous genes in insects or mammalian cells, e.g. vectors containing Bacillus thuringiens!s toxin genes for use in insect control, or recombinant vaccinia or swinepox viruses for use as
                                                                                                                                                                                                                                                                                                                                                                       60 CLMPAVQ-----NWLVEVPTVSPNSRFTYHMVSG---MSLRPRVNYLQDFSYQRSLKFR 110

                                   that is capable of directing the replication and expression of a heterologous gene in a selected host cell. The expression system comparises an EVP promoter sequence operably linked to the selected heterologous gene sequence operably linked to the selected heterologous gene sequence operably linked to the selected heterologous gene sequences and the production of selected capacity in insect and mammalian host cells e.g. human, rodent and proteins in insect and mammalian host cells e.g. human, rodent and capacity insect by thymidine kinase and spheroidin genes can also be used in vertebrate poxyiruses such as vaccinia and swinepox virus. The expression vectors can also be used for the control of insect pests through the insertion of a gene encoding an insect toxin into the quantities of the toxin. Spheroidin and thymidine kinase are nonessential proteins which makes them ideal for the insertion of exogenous DNA and they are capable of operating in a vertebrate poxyirus (e.g. vaccinia) mammalian cell expression vector system. Pox viruses are able to stimulate cell-mediated and humoral immunity.
                                                                                                                                                                                                                                                                                                                                    5;
of the Amsacta moorel entomopoxvirus spheroidin gene and flanking sequences. The DNA is used to make expression systems of the invention. The specification describes an Entomopoxvirus (EPV) expression system

```
8
gene is used in a method for detecting a mutation associated with canine von Willebrand disease (vWD) disease, where the mutation is a base deletion at codon 88 of the canine vWF gene. The methods provided in the specification and the products can be used for detecting carriers of the mutation that causes canine vWD. The methods can be used by breeders to reduce the frequency of the disease-causing allele and hence the incidence of the disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                VSPNSRFTYHMVSGMSLRPRVNYLQDFSYQRSLKFRPKGKTCPKEIPKGSKNTEVL--- 130

causes von Willebrand's disease in canines -

```
.;
8
                                                                           The present sequence is a canine prepro-von Willebrand factor (VWF) having homology with the human prepro-vWF sequence. Mutation in the vWF gene causes von Willebrand's disease (VWD) in dogs. The present sequence is used in diagnostic tests for detecting carriers of the mutation that causes von Willebrand's disease in canines such as Scottish terriers, Doberman pinschers, Shetland sheepdogs, Manchester terriers and Poodles. Such tests may be used by breeders to reduce the frequency of the disease-causing allele and the incidence of disease. The vWF cDNA sequences may be used to determine the genetic defect that causes vWD in other breeds as well as other species.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           131 --VWEECVANSVVI------LQNNEFGTI------IDLGTSRSILPQ 163
